

A 20 W BEOL SRAM tier clears the bar under the conservative rule, not just the generous one

Llama-3.1-8B decode on a measured B200 ledger, B=8 N=2048. C2 2-layer 800 mm² = 4.22 GB, tier duty 4.80%, burst 217 μ s in a 4.515 ms step. Achievable band is bottom-up from published silicon SRAM array energy and a BEOL-array energy ratio from the gain-cell literature. Stack geometry and materials are literature-anchored and stated as a design study.
